

Validated Integration with Oracle Hospitality's OPERA Property Management System

PCI-Validated Payment Security with EMV and Mobile Wallet Support

The FreedomPay Commerce Platform represents the simplest and most cost-effective way for Oracle Hospitality customers to deploy a PCI-validated point-to-point encryption (P2PE) solution with EMV, tokenization and value added benefits including; NFC & mobile wallet acceptance, Dynamic Currency Conversion, Digital Signature Capture, Advertising Management and more. For lodging, and other complex industries, FreedomPay offers a single platform that secures omni-channel payment environments and transforms the customer experience.

Seamless Integration Leveraging the Oracle Payment Interface

FreedomPay's fully integrated solutions for Oracle Hospitality are unique in many ways that provide our customers the ultimate in flexibility to run their business in the way that they have grown accustomed to, all while providing the piece of mind that their customers card data will never be at risk. Leveraging the Oracle Payment Interface (OPI) is just the start of what our interfaces have to offer.

Integration Details

- PCI-Validated P2PE Solution Removes all Servers, workstations and Network from PCI Scope – 100%
- Fully Integrated Solution utilizing USB Plug and Play Payment Devices - No Second Network drop at each Workstation
- DecisionPoint Network – Drive Revenue Through Payment Device Advertising
- Leading Mobile Wallet Acceptance for Apple Pay, Samsung Pay, Chase Pay, Citi Pay and Android Pay
- EMV and NFC-enabled Pay-at-Table with Validated P2PE and Seamless Integration with Oracle Hospitality POS Systems
- Globally Accessible, Multi-Currency and Multi-Lingual Product with Consolidated Reporting
- Complete Device Management Portal for Easy Maintenance and PCI Compliance
- Dynamic Currency Conversion – Drives Additional Revenue for Merchants
- Accertify® Integration – Provides Card-Not-Present Fraud Detection
- Digital Signature Capture with Online Display and Retrieval

Tokenization and Value-Added Services

FreedomPay's platform has a full tokenization engine, which allows for many different types of tokenization/account-on-file support scenarios that cover different token types, token permissions/security domains, and even 'same-card-same-token' for in-house loyalty programs. This tokenization engine works seamlessly with the OPI and FreedomPay's validated P2PE offering, and is a true Omni-channel solution, whereby the token is 'aware' and/or 'recognized' across all channels of ecommerce, front-office, back-office, and more.

Our value-added services engine allows for the OPI to extend offers and loyalty programs that can be combined with any of the pieces of our 'enablement'; i.e., whereas the Hosted Payment Page, Payment Information Proxy and FreedomPay Commerce Connect are all means to 'connect' to our FreeWay gateway, the offers and value-added services engine can work with all of them, and allow for our customers to track consumer loyalty and other items across their entire ecosystem.

The entire transactional system can be reported upon through our Enterprise Portal. This wholly hierarchical, self-service portal allows for full visibility over all transactions, as well as many value-added features such as 'card blacklisting' across an enterprise, access to dynamic currency conversion data, as well as upcoming features, which include full device management and branding control options.

Technical Details

- Oracle Hospitality for Lodging
 - Opera- version 5.5 E-Patch 16 & OPI version 6.1.0.20 supports all OXI/OWS interfaces

Changing The World Of Commerce
